CATALOG OVERVIEW

Two Core Product Families

Configurations are quoted against confirmed dimensions, pack format, target application and order quantity.

Buffing and Polishing

- Spiral-stitched cotton wheels and loose finishing wheels
- Bench grinder and drill-mounted configurations
- Compound bars and application-specific polishing kits
- Custom bore inserts, wheel density and pack assortments

TYPICAL STARTING POINT

500 pcs or sets - confirmed per SKU

Sanding and Grinding

- Wet/dry sheets, rolls and assorted grit packs
- Silicon carbide mesh screens and detail sanding tools
- Zirconia fiber discs and heavy stock-removal accessories
- Dispenser boxes, retail packs and bulk cartons

TYPICAL STARTING POINT

500 pcs or sets - confirmed per SKU

RETAIL READINESS

From Component Selection to Pack-Out

A complete RFQ should define the product configuration and the packaging outcome together.

Illustrative workflow visual; not evidence of a specific facility.

Configuration Scope

- Mix product families into workflow-focused accessory kits
- Select grit progression, wheel density, shanks and compounds
- Choose color box, blister, polybag, dispenser or bulk carton
- Apply supplied brand artwork, instructions and barcode assets

1

Brief

Application, dimensions, quantity and destination

2

Sample

Representative components and pack concept

3

Approval

Specification, artwork and barcode review

4

Production

Batch checks and pre-shipment confirmation

BUYER VERIFICATION

Define Acceptance Before Mass Production

Quality requirements should be tied to the approved sample and written specification for each product.

Suggested Checks

- Dimensions, bore fit, wheel runout and visible construction
- Ply count, stitch consistency and material density
- Grit consistency, backing adhesion and pack assortment
- Barcode readability, labels, carton quantity and gross weight

Illustrative workflow visual; not a facility claim.

Sample Evaluation Record

APPLICATION	Substrate, tool, speed and target finish
TEST METHOD	Cut rate, finish, heat, fit, life and safety observations
ACCEPTANCE	Measurable pass/fail result and approved reference sample
MASS PRODUCTION	Inspection frequency and pre-shipment evidence

Tip: Keep one signed or clearly identified approved sample for comparison with future production lots.

FASTER QUOTATIONS

Information to Include in Your RFQ

Supplying these details reduces clarification rounds and makes supplier quotations easier to compare.

Product

- Product family and intended application
- Dimensions, bore or shank and material
- Grits, ply count or assortment
- Pack quantity and required accessories

Commercial

- Initial quantity and annual estimate
- Target market and delivery destination
- Required Incoterm and timing
- Sample and inspection expectations

Branding

- Packaging format and artwork status
- Barcode type and supplied data
- Instruction and warning languages
- Master carton and pallet needs

Start a Sourcing Conversation

Send your target configuration or use the website RFQ form. After submission, drawings, artwork and barcode files can be supplied by replying to the inquiry email.
